

## Special Sizes and Shapes!

1. What is the overall length and width of the mattress? (take into account “tuck in” of sheets blankets etc, also take into account any frame edge that the mattress might be dropping in to – you don’t want to take skin off when you are just trying to sheet the mattress!)
2. What is the maximum height we can go to? (take into account any built in cabinetry above the mattress or curve in the end of a caravan or side of boat that may impact the overall height)
3. For Caravans, will you be requiring a bolster for the head of the bed or will your mattress be all in one piece?
4. For Boats, is your hatch, gangway, door large enough to take the mattress in one piece or will it need to be made in two (or more) pieces to be zipped in situ?
5. Will you need any cut off or specially curved corners?

How to Measure a radius (specially curved corner)
